Who has built a custom Joomla! template before?

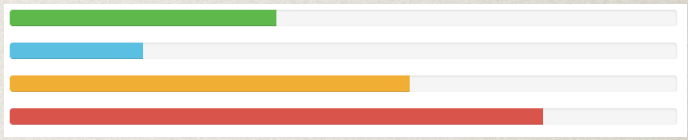
Today's Agenda

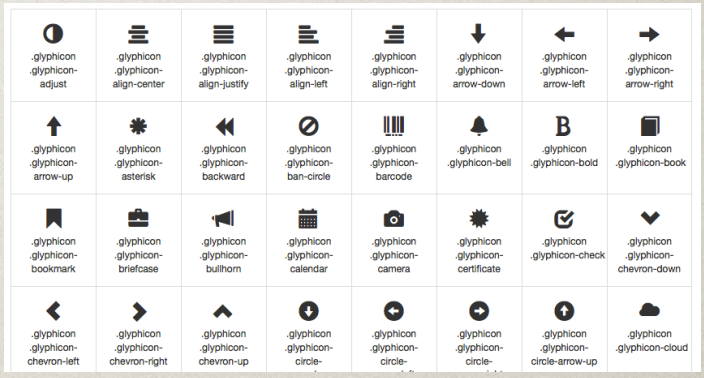
1. Useful Tools
2. Files & Directories
3. Bootstrap
4. Step-by-step coding with a demo site

Useful Tools

- Bootstrap V3 - http://getbootstrap.com/
- Bootstrap V2.3.2 - http://getbootstrap.com/2.3.2/
- Crunch - http://crunchapp.net/
- Editor – Coda / Notepad++ / Sublime Text

Bootstrap V3





Step-by-step process of building a Joomla! Template

Step 1

- Create templatedetails.xml file – specifies information about the template, including where the system can find all the resources needed for the template.

Step 2

- Create index.php file
- The basic file that provides the logic and positioning for the layout of the components and modules; your fundamental template file.

Step 3

- Thumbnail images, component.php file, favicon

Step 4

- Create folder images, css, fonts, LESS and JS

Step 5

- Language folder with description and files .ini, .sys.ini

Step 6

- Zip the file and it is ready to install.

You’re ready to go !

Other useful sites

- Tool to convert 2.x > 3.x Bootstrap code: http://upgrade-bootstrap.bootply.com/
- Bootstrap Upgrader: http://code.divshot.com/bootstrap3_upgrader/
- PlaceHolder – For creating Images as a placeholder: http://placehold.it/960x300

Are you a ninja now?

Gracias
धन्यवाद
Thank you
